# PROG POE PART 3

ST10053561

Table of Format

Figure 1 : Main Page

You will see this picture it is a home page of an app where you need to press number in order to take navigate. If you are using for first time press 1 for creating a new recipe.

Figure 2 : Recipe Page

This is where it takes if you press the 1 and you here you need to enter the values that is going to capture it store it for later purpose by clicking submit it will take to different page called steps page

Figure 3 : Steps Page

This is the steps page where you write the description for each recipe has you enter the submit button it asks if you want to enter a new step if yes then it will continue to enter more values.

If you say no it will show "Success message" and you go back to main page.

After the main page you press 2 for display here it will show some fields you can enter anything that is stored it if is matches then it will display else it will show error message.

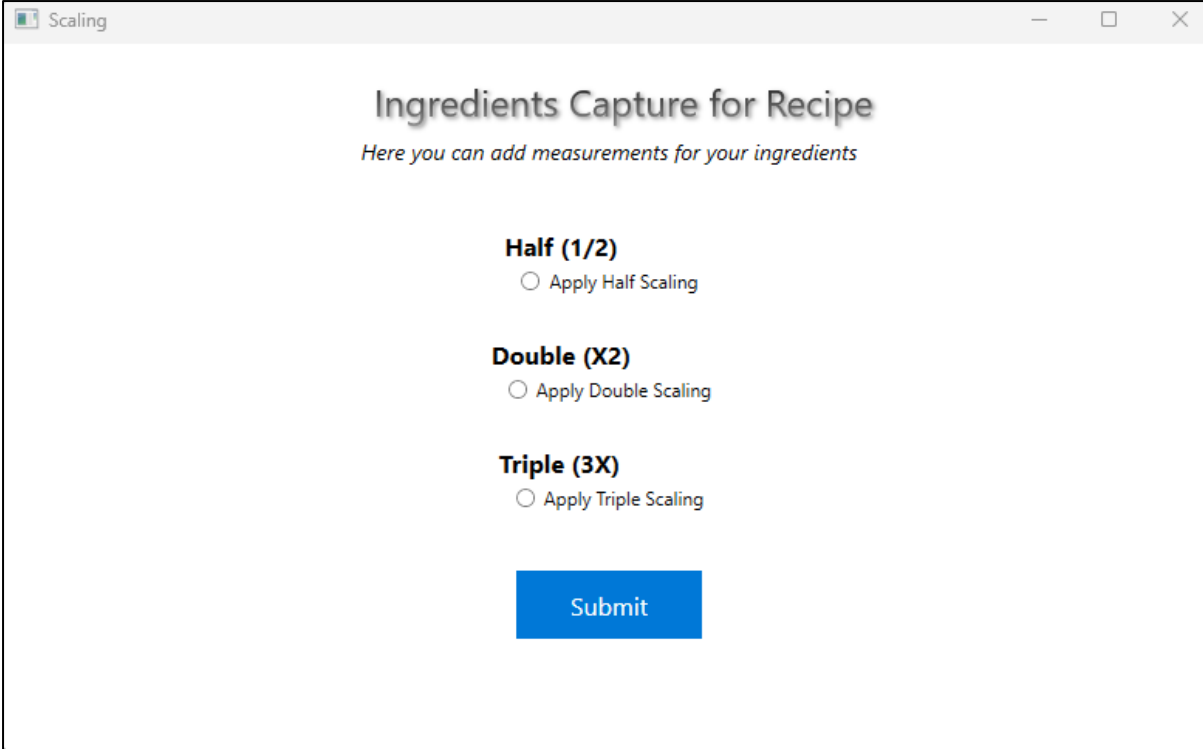

Figure 4 : Displaying values
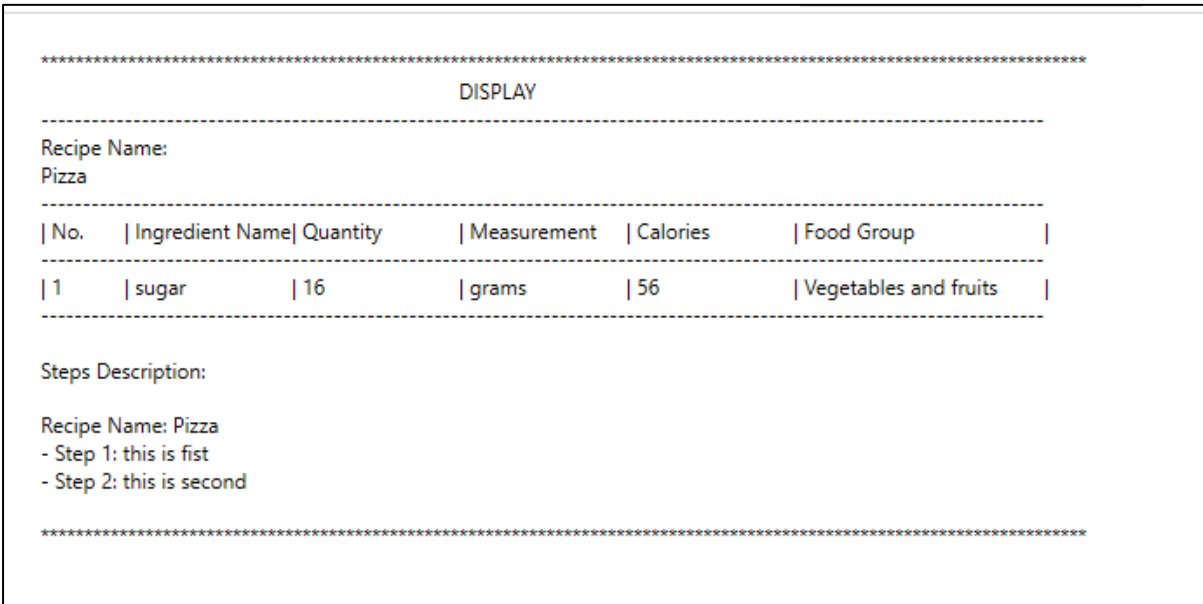

Figure 5 : Scaling

After if you done then it will take back to the main page again. If you want to add the measurements for ingredients you press 3 for scaling here you can chose any one from three. Then you press submit it applies the scaling for you if you want to check press 2 for display and press the value to check.

Figure 6 : After Scaling

If you want to reset the scaling that you applied then you press 4 it will reset to the normal values.

If you want to press 5 it will clear the data in other words it will clear the all the values that is stored so be careful

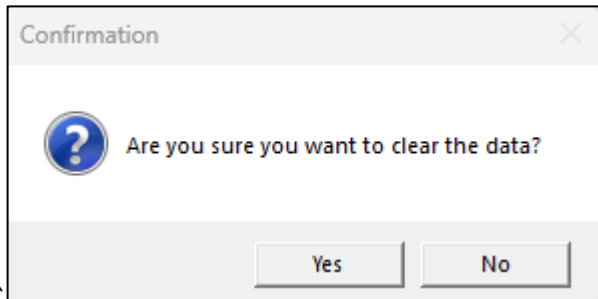

Figure 7 : clearing data

Lastly if you want to exit the program press 6 it exits the program.

So overall this is my simple and small program for recipe app I hope you like it and I spent half of the year to develop this program.
